AI Product Builder · Technical Product Manager

Product builder focused on operational software, workflow systems, and AI-native development. Experienced translating ambiguous business problems into structured products, backend architecture, and working software across edtech, SaaS, fintech, and startup environments.

Professional Experience

Product Builder & Technical Product Manager

Cognito Technology Canada Inc. · Aug 2023 – Present

Build and ship early-stage software products for technology startups across SaaS, fintech, logistics, and edtech verticals.

- Scoped, designed, and built products for 20–30 concurrent ventures — translating founder ideas into structured requirements, data models, implementation plans, and working prototypes.
- Architected backend systems including role-based access, multi-stakeholder data governance, and API structures using Supabase, PostgreSQL, and RLS policies.
- Owned implementation sequencing across planning, build, QA, and deployment — maintaining code quality and reducing drift across complex multi-file builds.
- Shipped user-facing interfaces and iterated on UX flows based on founder feedback and real usage patterns.
- Prepared business plans, market analysis, and product documentation for incubation program milestones.

Organization Design

GEEK Up · Aug 2020 – Sep 2021, Jul 2022 – Dec 2022

Designed organizational systems and operational workflows for a growing technology company.

- Redesigned competency frameworks, contribution models, and performance review processes used across engineering and design teams.
- Identified operational bottlenecks through workload and resource analysis — reducing review cycle time and improving capacity planning.
- Structured scalable internal systems for team coordination as headcount grew.

Learning Design Expert

Topica Edtech Group · Nov 2021 – Jul 2022

Analyzed platform workflows and operational data within a large-scale edtech environment serving 100K+ learners.

- Mapped LMS/CMS data flows and identified integration gaps that informed product improvement roadmaps.
- Built descriptive and predictive models to support product and operational decisions using SQL, Python, and spreadsheet tools.

Selected Projects

Cadence — Private Music Education Platform

Founder & Product Builder · Ongoing → [Case Study](#) | [Prototype](#) | [Production](#)

End-to-end product build for Suzuki music teachers and parents focused on lesson continuity, scheduling, and parent-guided practice support.

- Defined product architecture spanning lesson tracking, scheduling workflows, parent visibility dashboards, and structured practice modules.
- Built and iterated teacher-facing and parent-facing workflows focused on reducing scheduling overhead and improving lesson continuity between sessions.
- Designed backend governance using Supabase RLS to enforce parent-safe data access across teacher, parent, and student

roles.

- Coordinated full build cycle across UX flows, data modeling, deployment, QA, and iteration using Supabase, Vercel, GitHub, Claude Code, and Codex.
- Led product direction, user research, and scope decisions independently across multiple release cycles.

Puppy Program OS — Foster Engagement Platform

Product Designer & Project Lead · National Guide Dog Organization → [Case Study](#) / [Prototype](#)

Mobile-first platform concept for dog guide foster families covering puppy development tracking, behavioral assessments, and foster-to-organization communication.

- Led product scoping and system planning for a national guide dog organization's foster program, producing structured MVP documentation and workflow definitions.
- Designed multi-role access flows and backend governance concepts for foster families, staff, and organizational stakeholders.
- Built onboarding flows and mobile-first interface concepts for non-technical foster users, informed by firsthand experience as a dog guide foster.
- Focused on simplifying operational communication and reducing coordination overhead between foster families and program staff.

Multi-Agent Development Workflow

Independent Project

Structured workflow system for coordinating multiple AI models across planning, implementation, QA, and deployment.

- Designed sequential execution workflows across Claude Code, ChatGPT, and Codex to reduce implementation drift and maintain code quality across complex builds.
- Integrated Git-based checkpoints, documentation standards, and handoff protocols into a repeatable development workflow.
- Applied workflow systems across multiple active software projects under real shipping constraints rather than isolated experiments.
- Focused on practical orchestration of AI tools for operational software development and rapid iteration.

Education

Engineering Physics Ho Chi Minh City University of Technology (Bach Khoa)

Certifications

Google Data Analytics · IBM Data Analyst · Google Project Management ·

Technologies

HTML/CSS/JavaScript · Python · SQL · Supabase · PostgreSQL · Vercel · GitHub · Claude Code/Codex · Playwright · PowerBI

Knowledge/Project Management & Workflow tools

Jira · Notion · Claude Cowork · Obsidian · Draw.io · Whimsical
